

Gli elementi per costruire la cicloide.

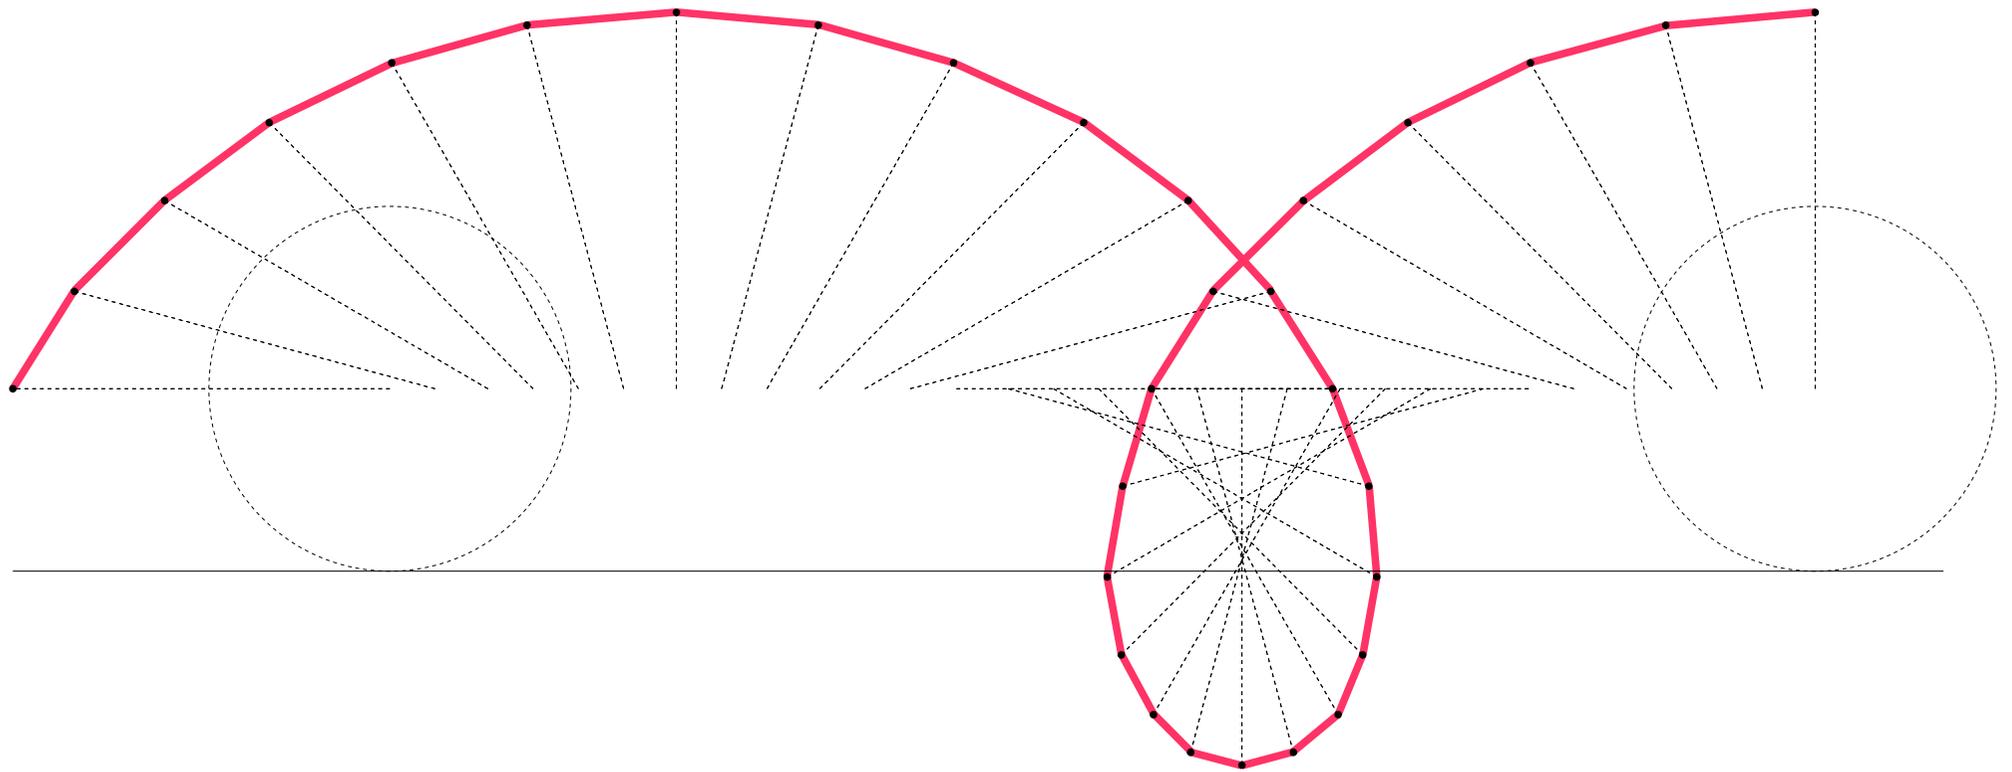

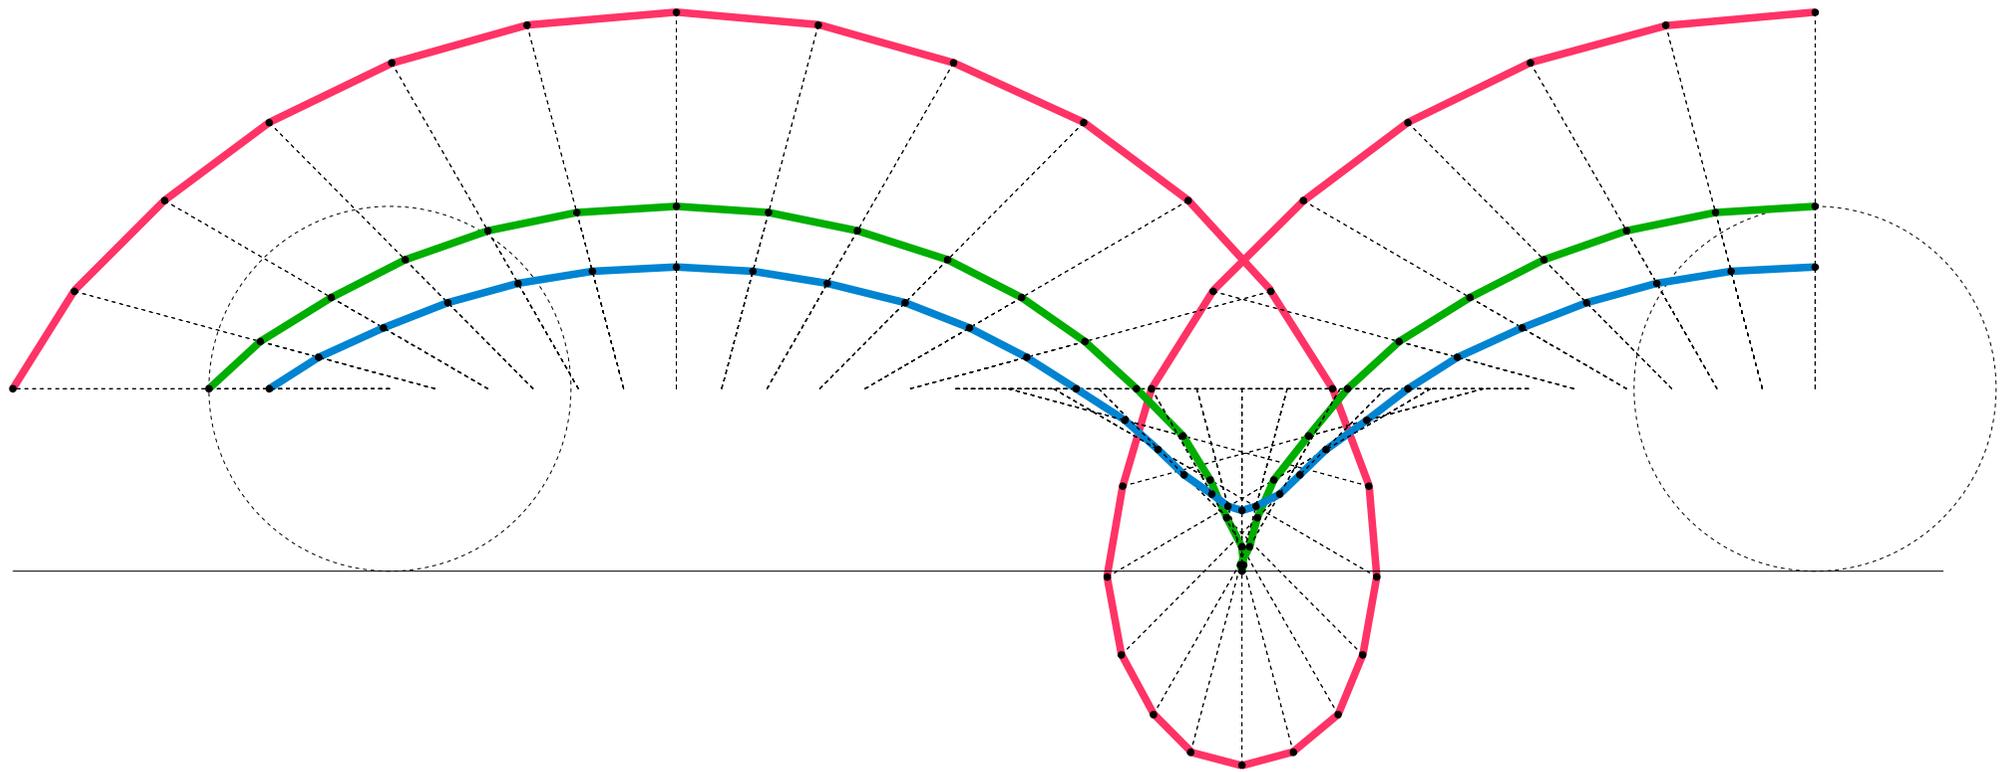

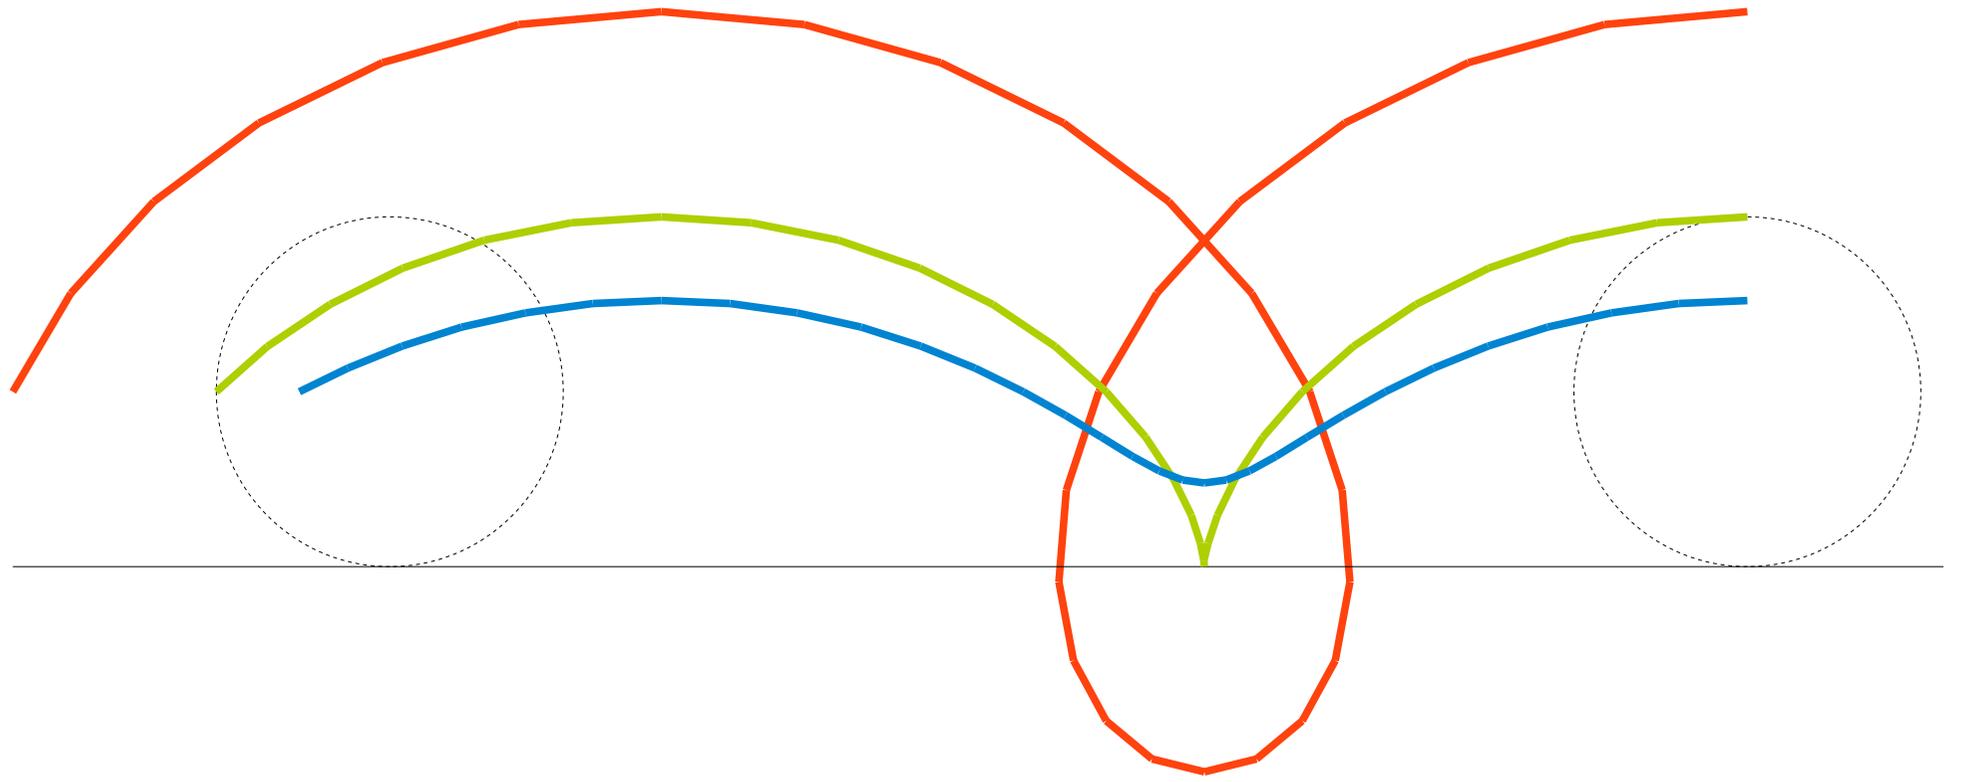

Tracciare la cicloide, a segmenti. 3 cicloidi: 1: Raggio lungo = estremo dei raggi del disegno; 2: cicloide-cicloide, R= raggio cerchio rotolante; 3: Raggio corto = 1,6 cm.

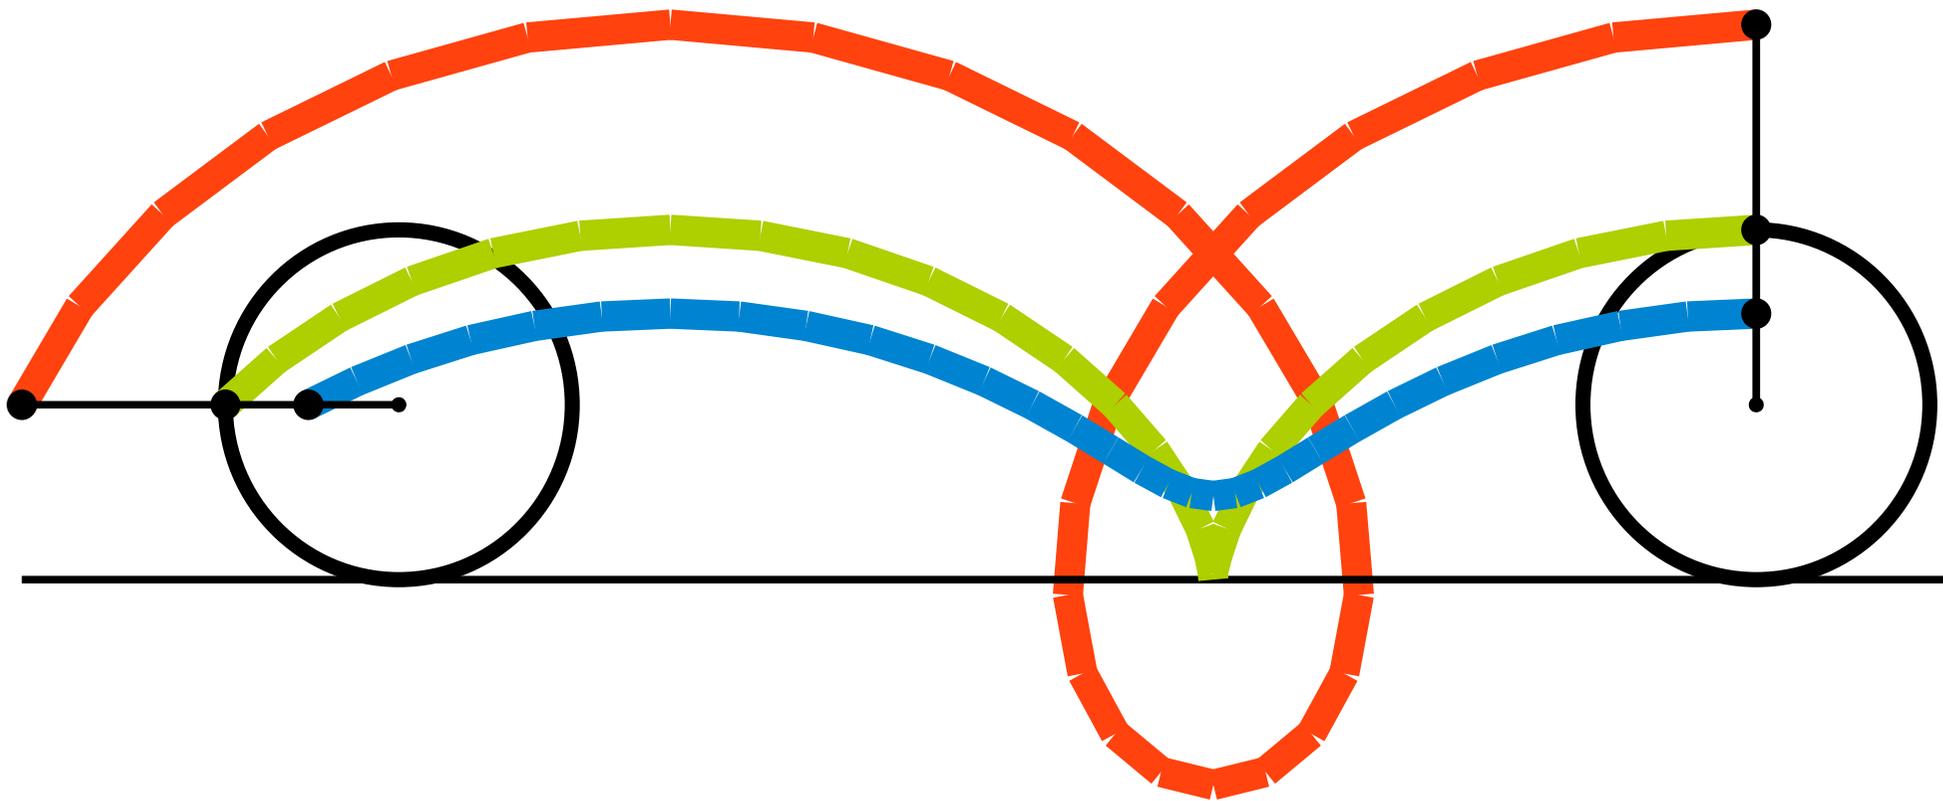

Questa cicloide e' stata disegnata prefissando il raggio del cerchio rotolante a 2,4 cm, e di conseguenza calcolando qual e' l'avanzamento che realizza con una rotazione di 15°, arrotondato poi al mm.
